

Sustainability Report 2023

Le Terrazze

The image features a minimalist design with a white central area. It is framed by a thick orange border on the top and left, and a dark purple border on the bottom and right. A dark purple wavy line starts from the bottom left corner and extends diagonally towards the top right, separating the white space from the dark purple background.

01. Main findings of the Climate Change Risk Assessment

The Climate Change Risk Assessment performed for Le Terrazze used the concept of risk being a combination of a hazard's exposure and its impact of disruption. Physical hazards' exposure was gathered from a multitude of available information sources, together with climate change scenarios and timeframes (present, long-term (2050), among others). The list of hazards was mostly aligned with the Appendix A of the Taxonomy regulation. The impact assessment is made for each hazard on 3 financial impact indicators (rent impact, investment impact and insurance premium impact).

According to the Climate Change Risk Assessment performed the main Physical risks for Le Terrazze are:

- **Heat Stress**
- **Water Stress**
- **Heavy Precipitation**

02. Indicators and Targets

Le Terrazze is committed to improving consistently its environmental performance, establishing long term objectives and annual targets. These objectives are aligned with the areas where measures were defined to minimize Climate Change risks, such as water and energy.

Each year, Le Terrazze tracks its progress against annual targets and actions and its performance is externally verified.

The following charts illustrate the progress of Le Terrazze against the key performance indicators that have guided actions with respect to energy efficiency, water efficiency, waste management and recycling, and safety and health.

Water efficiency (excluding tenants) of the owned portfolio (L/visit)

Electricity efficiency of the owned portfolio (kWh/m2 mall and toilet area)

Scope 1 and 2 GHG emissions (tonCO2e/m2 GLA)

Waste recycling as a proportion of waste produced (% by weight)

Proportion of waste (by weight) that is sent to landfill (%)
